

# Why do we want to utilize lexicon?

- Let's take ATIS dataset
  - It has finite set of cities in training
  - Will the model work for a new city?
  - We have **a list of all cities**, why not use it?
- 
- Another example
  - Imagine you need to fill a slot “music artist”
  - We have **all music artists** in the database like musicbrainz.org
  - How can we use it?
