

An example of HMM: output probabilities

Consider the following output probabilities for the vocabulary:

tag\word	a	bear	fly	honey	likes	sweet
ADJ	0.2	0.1	0.1	0.1	0.1	0.4
NOUN	0.1	0.2	0.2	0.2	0.2	0.1
VERB	0.1	0.2	0.2	0.1	0.3	0.1

The probabilities in each row also sum to 1.
