Let's add lexicon features to input words

- Let's **match every n-gram** of input text against entries in our lexicon

  Take me to San Francisco

- A match is successful when **the n-gram matches the prefix or postfix** of an entry and is at least half the length of the entry

  Matches:
  "San" → "San Antonio"
  "San" → "San Francisco"
  "San Francisco" → "San Francisco"

- When there are multiple **overlapping matches**:

  - Prefer **exact** matches over partial

  - Prefer **longer** matches over shorter

  - Prefer **earlier** matches in the sentence over later
