Collapsed Gibbs for LDA

Model

$$p(\theta_d) = \mathrm{Dir}(\beta) \qquad\qquad p(\phi_t) = \mathrm{Dir}(\alpha)$$

$$p(z_{dn}|\theta_d) = \Theta_{dz_{dn}} \qquad\qquad p(w_{dn}|z_{dn}, \Phi) = \Phi_{z_{dn}w_{dn}}$$

Can compute analytically

$$p(\Theta \mid Z) \qquad p(\Phi \mid Z, W)$$

$$p(Z)$$
